# Configure iOS 5, 4.3.5, and 4

1. From the Home screen, choose Settings, see Figure 1:

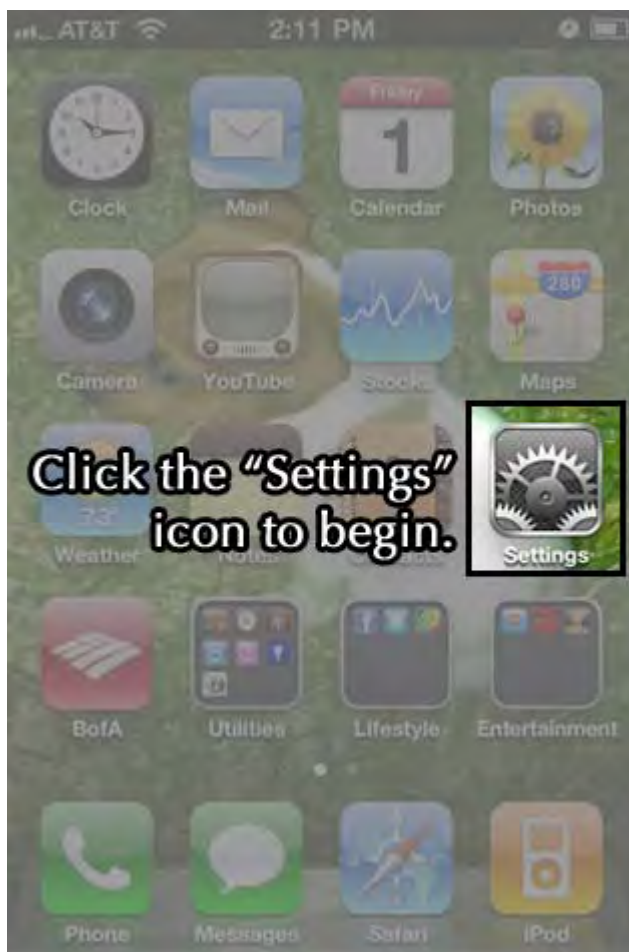

Figure 1: Click "Settings" to begin.

Next, tap Mail, Contacts, Calendars, see Figure 2:

Figure 2

In the Accounts section, tap Add Account..... See Figure 3:

Figure 3

2. Choose your email account type. For setting up email to work with your (mt) Media Temple service, choose Other. Figure 4 is shown below:
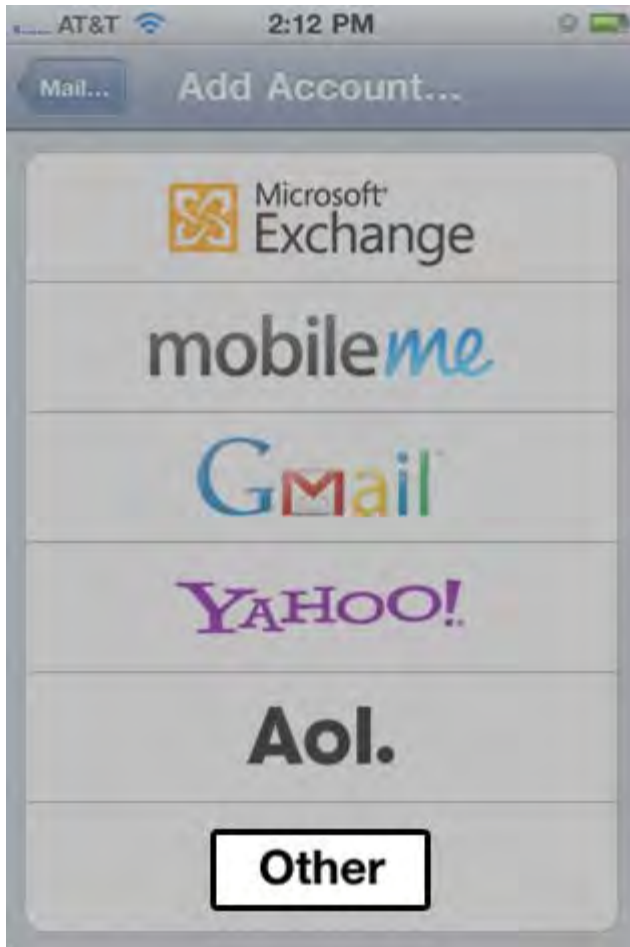

Figure 4

3. Select Add Mail Account under the Mail section, see Figure 5:

Figure 5

Enter your name and email address. Then tap Next, see Figure 6:

Figure 6

Make sure to enter your information, see Figure 7 below. The iPhone indicates these fields as *optional* but they are not.

Figure 7

On the next screen, enter your (gs) Grid-Service account details. We strongly suggest using your access domain which will work properly with SSL enabled. This is the default setting on the iPhone.

Figure 8: (mt) recommends using your mail access domain.

- o Incoming Mail Server
  Host Name: pittsburgh.fastwebengine.com
  User Name:thatguy@example.com
  Password: If you do not know your password, you can reset it from the
  AccountCenter. Please read this article for detailed instructions.
- o Outgoing Mail Server (SMTP)
  Host Name pittsburgh.fastwebengine.com
  User Name: thatguy@example.com
  Password: If you do not know your password, you can reset it from the
  AccountCenter. Please this article for detailed instructions.

Tap Save to save the entered information. Your iPhone will then verify your account
information.

4. Upon successful completion, you will be taken back to the Mail screen. Your account
   will now be listed. For this example, note That Guy's Email is listed under Accounts. See
   Figure 9:
